## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art in view of Schantz and Seidler. The admitted prior art discloses the device as claimed in claim 7, except that the admitted prior art does not include the capture means as claimed being inclined and movable downwards.

Schantz discloses a terminal 10 including means for accommodating a portion of a conductor (in particular the groove 18 and associated hole in the groove) and projecting plate or capture means 16 which is inclined and movable downward to fasten bare wire 26 to the terminal, said capture means 16 being received in groove or accommodating means 18. At the time of the invention, it would have been obvious to replace the hole 4331 in the second strip with a groove and projecting plate as taught in Schantz. The suggestion or motivation for doing so would have been to better secure the wire to the terminal prior to soldering so that the wire does not inadvertently detach, as taught in Schantz (see col. 1, lines 15-50 and col. 2, lines 45-60). Schantz teaches that the tab can be located "in the terminal 10 at the location where it is desired to solder the end of the conductor" (col. 2, lines 20-25) but does not explicitly teach that the notch be made in the free end of the terminal strip. Seidler teaches terminal strip 16 including a notch

and plate 36 configuration for holding conductive mass 28 where the notch and plate are located at the free end of the strip. At the time of the invention, it would have been obvious to locate the notch in the admitted prior art at the free end of the strip as taught in Seidler. The exact location of the notch would have been a matter of design engineering choice, given that Schantz notes that the tab may be located at any location where it is desired to solder the end of the conductor.

### ***Response to Arguments***

Regarding claim 7, applicant argues that claim 7 is similar to allowable claim 1. The examiner disagrees in that claim 7 does not include the subject matter that was previously indicated as being allowable subject matter.

### ***Allowable Subject Matter***

Claims 1-3 and 8 are allowable for the reasons previously indicated.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
